

Active Tasmania

Site Plan

The Tasmanian Active Infrastructure Grants Program provides grant funding for the sector to build new and upgrade existing sport and active recreation infrastructure. The aim of the program is to enhance community sport and active recreation participation opportunities through the provision of spaces that are safe, inclusive, accessible, meet present standards and cater for a range of activities.

The site plan and design must be specific to the project and are mandatory requirements for the program. These documents need to be developed by an appropriately qualified professional for the scope and scale of the project.

What is a site plan?

A site plan shows the location or positioning of the new infrastructure in relation to existing infrastructure, land boundaries or site boundaries.

For small-scale projects, an applicant may use existing building plans, site plans or aerial imagery to 'mark-up' and then provide further written detail.

What level of design drawing is required?

Design documentation relative to the project size and requested funding amount is required.

Applicants seeking funding for large projects with complex design requirements and significant statutory approval requirements should submit architectural documentation and concept plans.

For small-scale projects, a sketch plan is sufficient. A sketch plan should enable any reasonable person to clearly understand the intention of the project's design. It may also include artistic impressions, building elevations and sections. Standard drawings may also be available from contractors that specialise in the provision of sheds, lighting and standard buildings.
